

GIS Consultancy & Training

GIS skills are relatively limited in Africa - hence capacity building is extremely important. GeoSpace is a leading GIS Consultancy and Training service provider in Africa. We specialise in providing technical assistance and management to organizations that want to implement an effective and sustainable operational GIS Unit. Our in-house subject matter specialists are able to provide our clients with total solutions and training on various GIS platforms.

We have successfully implemented large GIS, database application and consultancy projects and training for a number private, government and development partners in more than 15 African countries. We prefer to manage and monitor processes while we train the client to implement GIS operations themselves, or through hands on operational processes.

GeoSpace is furthermore on the World Bank's General Data Dissemination System panel of consultants for the provision of technical assistance in GIS implementation and training for statistical government agencies in Africa. As such our consultants have provided technical assistance and training in more than 10 African countries since 2003.

We believe in providing the client with the entire scope of GIS implementation (not just software training), focusing on the hardware, software, data, methodology, maintenance, skills and training facets that makes any GIS sustainable.

We are able to provide consultancy and training on the following:

- GIS, resources and data audits
- GIS implementation methodology and planning
- GIS organizational implementation training
- GIS software training
- Database design, implementation and training
- Custom system and application development
- Web GIS development and implementation
- Data collection and integration
- Data manipulation, analysis and dissemination
- Thematic map creation
- Custom printing applications
- Mobile GIS applications

To discuss your GIS and Consultancy and Training needs please contact Hennie Loots at: henniel@geospace.co.za.

Over two decades of success in more than 15 countries
